Wolters Kluwer

# Tetracyclines

Tetracycline

Common used

## TETRACYCLINES

*Demeclocycline* **DECLOMYCIN**

*Doxycycline* **VIBRAMYCIN**

*Minocycline* **MINOCIN**

*Tetracycline*

# Tetracyclines

## Mechanism of action

-bind **reversibly** to the **30S** subunit of bacterial ribosomes

-prevent the binding of tRNA to the mRNA-ribosome complex

# Tetracyclines

## Antibacterial spectrum

- Bacteriostatic
- Effective against gram-positive, gram-negative, protozoa, spirochetes, atypical, etc

Cause pneumonia  
Mycoplasma bacteria  
lack cell wall  
صه النسيان

## Commonly used for the treatment of:

1. Acne (doxycycline) <sup>orally</sup> Cutibacterium acnes, bacteria that causes it
2. Chlamydia (doxycycline)
3. Peptic ulcer disease (tetracycline)
4. Lyme Disease (doxycycline)
5. Mycoplasma Pneumonia (doxycycline)

Wolters Kluwer

Cancer cells use efflux pump as resistance pathway

## Tetracyclines

### Mechanisms of resistance

- Efflux pump (most common)
- Enzymatic inactivation of the drug
- Interfering with binding to ribosomes *By bacterial proteins*
- \* Cross-resistance is *not* common

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

Have high affinity to divalent & trivalent cations

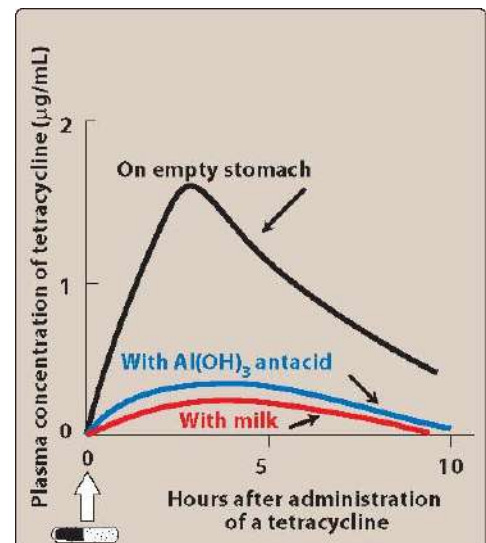

## Tetracyclines

### Pharmacokinetics

#### Absorption

- Oral
- Adequately absorbed
- ↓ absorption when administered with dairy (high cations) → formation of nonabsorbable chelates \*

\* Antacids ⇒ Have cations

12/7/2023

Wolters Kluwer

# Tetracyclines

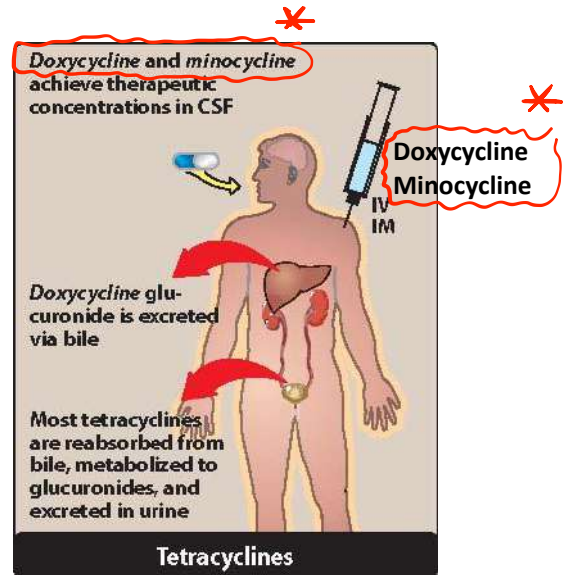

## Pharmacokinetics

### Distribution

- Distribute well in body fluids, including CSF *Didn't used for meningitis.*
- Bind to tissues undergoing calcification e.g., bones, teeth.
- Cross placenta and deposit in fetal bones

### Elimination

- Tetracycline eliminated unchanged in urine
- Doxycycline eliminated in bile/feces

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Tetracyclines

## Adverse effects

### Gastric discomfort:

- irritation of gastric mucosa
- esophagitis

### Effects on calcified tissues

- deposited in tissues undergoing calcification, e.g., bones in children.
- dental hypoplasia *abnormal or incomplete development of an organ or tissue*
- growth problems
- pediatric use is limited

GI disturbance

Deposition of drug in bones and teeth

12/7/2023

Wolters Kluwer

# Tetracyclines

## Adverse effects

- **Hepatotoxicity**
- **Phototoxicity:** *Frequent in Tetracycline & Demeclocycline*

-severe sunburns (recommended to wear sun protection)

- **Vestibular dysfunction:**

-dizziness, vertigo, tinnitus

- **Pseudotumor cerebri**

Benign, intracranial hypertension characterized by headache and blurred vision may occur rarely in adults. Although discontinuation of the drug reverses this condition, it is not clear whether permanent sequelae may occur

Liver failure

Phototoxicity

Vertigo

Avoid in pregnancy

12/7/2023

Wolters Kluwer

# Tetracyclines

## Contraindications

1. Pregnant women
2. Breast-feeding women
3. Pediatric age group <8 years

*Teratogenic drug*

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Tigecycline

*Not used as First line*

## Antibacterial spectrum

- Effective against MRSA
- Effective against multi-drug resistant streptococci
- Effective against vancomycin-resistant enterococci (VRE)
- Effective against ESBL gram-negative bacteria
- Effective against Acinetobacter spp
- NOT effective against Pseudomonas

12/7/2023

 Wolters Kluwer

# Aminoglycosides

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

 Wolters Kluwer

# Aminoglycosides

Target G<sup>-ve</sup>

Anti TB  
Cystic fibrosis in children

## AMINOGLYCOSIDES

Amikacin

Gentamicin GARAMYCIN

Neomycin NEO-FRADIN

Streptomycin

Tobramycin TOBREX

# Aminoglycosides

## Mechanism of action

- Bind to 30S ribosomal subunit
- Interfere with assembly of the functional ribosomal apparatus
- Cause the 30S subunit of the completed ribosome to misread the genetic code

# Aminoglycosides

## Antibacterial spectrum

- Bactericidal
- Concentration-dependent  $C_{max} \Rightarrow 8-10$  times of MIC
- Exhibit PAE
- Effective against gram-negative bacilli (INCLUDING multi-DRUG resistant *P. aeruginosa*)
- Used in combination with  $\beta$ -lactams

Synergic effect  $\Leftarrow$  Gentamicin + Ampicillin  $\Rightarrow$  Neonatal meningitis

Wolters Kluwer

Some clinical uses of aminoglycosides

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Aminoglycosides

## Mechanisms of resistance

- 1) efflux pumps
- 2) decreased uptake
- 3) modification and inactivation by plasmid-associated synthesis of enzymes that hydrolyze aminoglycosides
  - Amikacin is less vulnerable to these enzymes

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Aminoglycosides

## Pharmacokinetics

### Absorption

-all are given IV (except neomycin) *no systemic*

### Distribution

- variable distribution in body fluids
- inadequate distribution in CSF
- cross the placenta

*tabomycin → inhalation*

*Just topical*

*May be teratogenic*

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

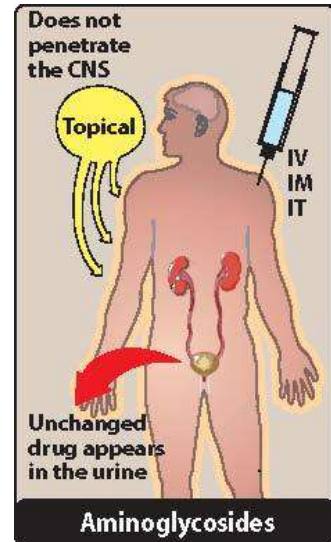

# Aminoglycosides

## Pharmacokinetics

### Elimination

-90% are excreted unchanged in the urine

-accumulation occurs in cases of renal dysfunction

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Aminoglycosides

## Adverse effects

### • Ototoxicity (vestibular and auditory)

-might cause irreversible deafness

-Vertigo (especially with streptomycin)

### • Nephrotoxicity

-disrupt  $Ca^{++}$ -mediated transport processes

-from mild reversible renal impairment to irreversible acute tubular necrosis

Ototoxicity

Nephrotoxicity

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Aminoglycosides

## Adverse effects

- **Neuromuscular paralysis**  
- patient with myasthenia gravis are at risk
- **Allergic reaction**  
- Mostly contact dermatitis with topical neomycin

Paralysis

Skin rash

# Macrolides and Ketolides

Erythromycin

Telithromycin

## MACROLIDES/KETOLIDES

brand name  
Zomax ←

**Azithromycin** ZITHROMAX

**Clarithromycin** BIAXIN

**Erythromycin** VARIOUS

**Telithromycin** KETEK

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

*interfers of Assembly two subunits of ribosomes*

# Macrolides and Ketolides

## Mechanism of action

- bind irreversibly to a site on the 50S subunit of the bacterial ribosome
- Inhibit translocation step
- Interfere with transpeptidation
- Binding site identical/near that of clindamycin or chloramphenicol

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Macrolides and Ketolides

## Antibacterial spectrum

-bacteriostatic (can be -cidal at high doses)

### • Erythromycin

-similar spectrum to penicillin G *Had been used as alternative to penicillin G*

-used in cases of penicillin allergy

### • Clarithromycin

-similar to erythromycin

-effective against intracellular pathogens e.g. Chlamydia, Legionella, H. Pylori etc... *Cause pneumonia*

*infect gastric epithelium*

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

 Wolters Kluwer

# Macrolides and Ketolides

## Antibacterial spectrum

### • Azithromycin

-less active against staph and strep species

-more active against RTI due to *H. influenzae* or *M. catarrhalis*

-increasing *S. pneumoniae* resistance

*Concentration dependant*

12/7/2023

 Wolters Kluwer

# Clinical Spectrum of Macrolides

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Macrolides and Ketolides

## Mechanisms of resistance

- 1) the inability of the organism to take up the antibiotic
- 2) the presence of efflux pumps
- 3) a decreased affinity of the 50S ribosomal subunit for the antibiotic
- 4) the presence of plasmid-associated erythromycin esterases in gram-negative organisms

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Macrolides and Ketolides

## Pharmacokinetics

### • Administration

- oral (enteric-coated tablets for erythro)
- Erythro and azithro are available IV

### • Distribution

-distribute well in body fluids except CSF

### • Elimination

-hepatic metabolism

Inhibit CYP450 system (drug-drug interactions) Erythromycin

Wolters Kluwer

# Macrolides and Ketolides

## Pharmacokinetics

### • Administration

- oral (enteric-coated tablets for erythro)
- Erythro and azithro are available IV

### • Distribution

-distribute well in body fluids except CSF

### • Elimination

-hepatic metabolism

Inhibit CYP450 system (drug-drug interactions)

	Erythromycin	Clarithromycin	Azithromycin	Telithromycin
Oral absorption	Yes	Yes	Yes	Yes
Half-life (hours)	2	3.5	>40	10
Conversion to an active metabolite	No	Yes	No	Yes
Percent excretion in urine	15	50	12	13

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Macrolides and Ketolides

## Drug-drug interactions

- Inhibit hepatic metabolism of a number of drugs

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Macrolides and Ketolides

## Adverse effects

- Gastric distress and motility

-high doses of erythromycin cause smooth muscle contraction and bowel movement.

Could this be helpful? Help in diabetic, because diabetic reduce gastric motility.

- Jaundice
- Ototoxicity
- Hepatotoxicity

-contraindicated in patients with hepatic dysfunction

GI disturbance

Jaundice

Ototoxicity

Wolters Kluwer

# Fidaxomicin

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

 Wolters Kluwer

# Fidaxomicin

- **Structure:** macrocyclic, similar to macrolides
- **MOA:** acts on the  $\sigma$  subunit of RNA polymerase → disruption of bacterial transcription →  protein synthesis
- Very narrow-spectrum: gram-positive aerobes/anaerobes
- Poorly absorbed (remains in GI tract), primarily used for *C. difficile* infections
- Cross-resistance with other antibiotics is rare. **Why?**
- \* Cross-allergy with macrolides
- **Adverse effects:** nausea, vomiting, abdominal pain

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

 Wolters Kluwer

# Chloramphenicol

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Chloramphenicol

- Broad-spectrum
  - Mainly –static (but can be –cidal)
  - Limited use due to high toxicity
  - **MOA: reversibly to the bacterial 50S ribosomal subunit and inhibits peptidyl transferase reaction**
  - Given IV: can be secreted in breast milk
- Contraindicated in breastfeeding mothers**

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

Gray baby syndrome: Neonates have a low capacity to glucuronidate the antibiotic, and they have underdeveloped renal function, which decreases their ability to excrete the drug. This leads to drug accumulation to concentrations that interfere with the function of mitochondrial ribosomes, causing poor feeding, depressed breathing, cardiovascular collapse, cyanosis (hence the term "gray baby"), and death. Adults who have received very high doses of chloramphenicol may also exhibit this toxicity.

# Chloramphenicol

## Adverse effects

effects  
bone marrow

G6PD deficiency

• **Aplastic anemia, hemolytic anemia**  
in case of G6PD deficiency

• **Gray baby syndrome**

-accumulation of the drug due to underdeveloped liver/kidney functions

-can cause death

• **Drug-drug interactions**

-inhibits liver enzymes

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

Anemias: Patients may experience dose-related anemia, hemolytic anemia (observed in patients with glucose-6-phosphate dehydrogenase deficiency), and aplastic anemia. [Note: Aplastic anemia is independent of dose and may occur after therapy has ceased.]

## Critical Thinking Question

Because mitochondria ribosomes have 50S & 30S, like prokaryotic cells

?

Since chloramphenicol is toxic due to its targeting of the mammalian protein synthesis ... which type of ribosomes in mammalian cells will be most susceptible to inhibition by chloramphenicol? And why?

12/7/2023

Wolters Kluwer

# Clindamycin

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

\* Some one has sever infection with MRSA and prescribed clindamycin for 3 days then they return to clinic with bloody diarrhea, here you should prescribe vancomycin

Not used in life-threatening MRSA like pneumonia & meningitis

# Clindamycin

- **MOA:** same as erythromycin
- Effective against gram-positive bacteria: staph INCLUDING MRSA
- Oral and IV
- **Adverse effects:** skin rash, diarrhea : associated with pseudomembranous colitis caused by overgrowth of *C. difficile*
- Treated with vancomycin or metronidazole

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Wolters Kluwer

# Oxazolidinones

12/7/2023

Copyright © 2018 Wolters Kluwer • All Rights Reserved

Didn't used first-line in MRSA, it's used alternative for vancomycin or if MRSA resists vancomycin.

## Linezolid

- Developed to treat resistant gram-positive organisms, such as MRSA (not bacteremia. Why?), VRE, resistant mycobacterium and penicillin-resistant streptococci
- **MOA:** binds to the bacterial 23S ribosomal RNA of the 50S sub-unit, thereby inhibiting the formation of the 70S initiation complex
- Bacteriostatic (-cidal against strep)

<b>Gram (+) cocci</b>
Enterococcus faecalis (including vancomycin-resistant strains)
Enterococcus faecium (including vancomycin-resistant strains)
Staphylococcus epidermidis (including methicillin-resistant strains)
Staphylococcus aureus (including methicillin-resistant strains)
Staphylococcus haemolyticus
Streptococcus pneumoniae (including penicillin-resistant strains)
Viridans group streptococci
<b>Gram (+) bacilli</b>
Corynebacterium species
Listeria monocytogenes
Gram (-) cocci
Gram (-) rods
<b>Anaerobic organisms</b>
Clostridium perfringens
Spirochetes
Mycoplasma
Chlamydia
<b>Other</b>
Mycobacterium tuberculosis

12/7/2023

Wolters Kluwer

# Linezolid

- **Main clinical uses:** Treatment of drug-resistant gram-positive organisms  
e.g., alternative to daptomycin for VRE
- **Pharmacokinetics:** oxidized in the liver into two inactive metabolites → excreted in urine
- **Adverse effects:** GI upset, thrombocytopenia, serotonin syndrome, peripheral neuropathy (with prolonged use)

<b>Gram (+) cocci</b>
Enterococcus faecalis (including vancomycin-resistant strains)
Enterococcus faecium (including vancomycin-resistant strains)
Staphylococcus epidermidis (including methicillin-resistant strains)
Staphylococcus aureus (including methicillin-resistant strains)
Staphylococcus haemolyticus
Streptococcus pneumoniae (including penicillin-resistant strains)
Viridans group streptococci
<b>Gram (+) bacilli</b>
Corynebacterium species
Listeria monocytogenes
Gram (-) cocci
Gram (-) rods
<b>Anaerobic organisms</b>
Clostridium perfringens
Spirchetes
Mycoplasma
Chlamydia
<b>Other</b>
Mycobacterium tuberculosis
