Q1>Which of the following is NOT a related to the temporal bone?

- a) Stylomastoid foramen
- b) Petrous process
- c) Jugular foramen
- d) Lambdoid suture
- e) Mandibular fossa

Answer: d

Q2>Which of the following features is NOT part of the ethmoid bone?

- a) Nasal Septum
- b) Cribriform plate
- c) Crista Galli
- d) Inferior nasal concha
- e) Floor of Cranial cavity

Answer: d

Q3>Which of the following bones is incorrectly matched with respect to its feature?

- a) Sphenoid bone - Sella Turcica
- b) Ethmoid bone
Crista Galli
- c) Sphenoid bone - Foramen rotundum
'chool Col
- d) Frontal bone - Supraorbital foramen
Commi
- Temporal bone - Hypoglossal canal

Answer: e

Scientific team

Q4>Which of the following bony landmarks is part of the middle cranial fossa view?

- a) Lesser wing of the sphenoid
- b) Vomer bone
- c) Petrous process of temporal
- d) Internal auditory meatus
- e) Pterygoid plates

Answer:c

Q5>At the age of 1 year which part of the skull most likely is unossified?

- a) Pterion
- b) Bergma
- c) Asterion
- d) Lambda
- e) Squamous suture

Answer:b

Q6>Which of the following is incorrect match relative to the mandible?

- a) Mandibular foramen • Ramus of mandible
- b) Mental Foramen - Lateral surface of the body
- c) Submandibular fossa - Inferior to mylohyoid line
- d) Mental Foramen in infant - close to Inferior boarder of the body
- e) Mylohyoid groove - Lateral surface of the body

Answer:e
