# Healthcare Economic Terms: Cost

**Dr. Omnia Elmahdy**

# I. Cost:

Cost of health care لازم يكون محسوب فيه opportunity cost

In economic terms, cost is what a health services activity will **impose** on patients, their families and other agencies as well as the **costs** to the health sector itself.

وكالات

كل ما صارت ال opportunity cost كبيرة  
بيطل اعمل ال choices اللي كنت اعملها

The **cost** of using a resource in a particular service or treatment is, not (necessarily) the price that is paid for that resource but the benefit foregone (the opportunity lost) by not choosing the alternative

Efforts to determine the cost of services and programmes from the perspective of a health economist are likely to differ from those employed by an accountant.

## Seriously ill requires:

- More devoted time (cost)
- Higher qualifications and expertise (cost)
- معدات متطورة Sophisticated equipment (cost)
- ادوية قوية Potent medication (cost)

## Less Seriously ill requires:

- Less devoted time (cost)
- Lower qualifications and expertise (cost)
- Regular equipment (cost)
- Regular medication (cost)

There are basically **three stages** involved in the process of **costing** health care services and interventions:

ان تعرف على انواع الـ costs

(1) **Identification** of costs

قياس التكاليف المحددة

(2) **Measurement** of identified costs; and

(3) **Translation** into a **monetary amount** **مبلغ نقدي** (*bearing in mind*

*that money may not always be the most representative indicator of opportunity cost*)

هون اني لازم احوول الرقم اللي بطلع عندي  
لمعنى (اعمله تفسير)

# Direct vs indirect cost

## 1. Direct costs

These relate to the use of resources directly as a result of the treatment and health care process.

They include:

- **Drug costs,**
- **Cost of nursing,**
- **Medical and other staff time involved in delivering care and administering the procedures,**
- **Costs of materials and equipment used in service provision,**

• **PLUS** costs to **other organizations** involved in the process

**AND** to **patients**, in terms of **time** costs, **transport** costs and out-

of-pocket **expenses**.  
نفقات

Dr Omnia Elmahdy

## 2. Indirect costs/productivity costs

These relate to 'losses' to society incurred as a result of the impact of disease, illness and treatments in preventing people from engaging in normal daily activities, such as work, domestic responsibilities and social and leisure engagements.

In terms of work losses, this is called 'productivity costs' – which refer to 'the costs associated with lost or impaired ability to work or to engage in leisure activities due to morbidity and lost economic productivity due to death.

### 3. Intangibles غير ملموسة

These relate to the **distress, suffering, anxiety** and impact on **quality of life** (QOL) resulting from illness and poor health and their treatments

**An intangible good** <sup>غير ملموسة</sup> is a good that **does not have a physical nature**, as opposed to a physical good (an object). Digital goods such as downloadable music, mobile apps or virtual goods used in virtual economies are all examples of intangible goods.

(These are the things that **have to be experienced** to be **measured and valued**)

# Fixed cost VS Variable cost

	Fixed cost مصاريف ثابتة	Variable cost مصاريف متغيرة
Definition	Cost of production, which <b>does not vary with time</b> , or with size of production (output) over time	Cost of production, which <b>varies with time</b> and size of production (output).
Examples	<ul style="list-style-type: none"> <li>- Cost of building</li> <li>- Fixed cadre;</li> <li>- Worker salaries &amp; benefits.</li> </ul>	<ul style="list-style-type: none"> <li>- Worker supplies (e.g. gloves)</li> <li>- Patient care supplies</li> <li>- Paper</li> <li>- Food</li> <li>- Lab supplies</li> <li>- Medications</li> </ul>

Fixed Costs	Variable Costs
1. These costs are independent of output.	1. These costs vary with the level of output.
2. These are the costs of fixed factors.	2. These are the costs of variable factors.
3. These costs exist or arise, even at zero level of output.	3. These costs become zero at zero level of output.
4. These costs are found only in the short period.	4. These costs are seen in short and long periods.

# Medical Care Cost

## Average cost:

Is the total cost divided by the number of units provided or produced.

## Average Cost

Numerator

Average Cost  
Formula

=

Total Cost of Production  
Number of Units Produced

denominator

When average costs are falling, there exist economies of scale اقتصادية جدوى; when average costs are rising, there exist diseconomies of scale مساويء اقتصادية

One of the reasons diseconomies arise is because beyond a certain occupancy level مستوى الإشغال it becomes increasingly difficult, if not impossible, for staff to deal with a larger number of beds in a ward setting.

زيد ما بهيسر في حركة حالات  
عدد مرضى عالي و لكن عدد الأسترة قليلة

# Medical Care Cost

## Opportunity cost:

آثار

### Implications of Opportunity Cost:

1. Optimal service planning
2. Deciding to do A implies deciding not to do B,  
i.e. value of benefits from A > B.

**OPPORTUNITY COST**  
IS WHAT A PERSON  
SACRIFICES WHEN THEY  
CHOOSE ONE OPTION  
OVER ANOTHER

**Opportunity Cost** =

تسو الاثني الذي يفضي فيه  
**What One Sacrifice**

**What One Gain**

تسو الاثني الذي يحصل عليه

- **Health economists** stress the importance of **value** unlike **accountants** who are just interested in **money**.
- When budgets are limited, resources invested into one area will be at the expense of **a loss of opportunity in another** and resources should be valued in terms of this lost opportunity—**the opportunity cost**.

## Opportunity Cost

[ä-pär-'tü-nä-tē 'kōst]

The potential benefits that an individual, investor, or business misses out on when choosing one alternative over another.

# Medical Care Cost

التكلفة الافتراضية

## Fiction cost:

Value of production lost due to time needed to find a replacement worker and restore production to a previous level.

- What does it cost to the economy if a worker **misses a day of work** to go to the doctor?
- What if a **sick person can go back** to work – what is the gain to economy?
- Use the friction cost to value lost time from paid work.

# Medical Care Cost

## Marginal cost:

This is the **cost of producing one extra unit**, or in health care terms, the **cost of delivering one extra item of services** (treating one extra case, vaccinating one extra child and so on).

## Marginal Cost

[ˈmɑːrj-nəl ˈkɒst]

The change in total production cost that comes from making or producing one additional unit.

## Marginal cost or average cost?

تخذ يس

For example, in a comparison of two anaesthetic programmes that require different types of infrastructure, average costs are recommended because the fixed cost element would be ignored by the use of marginal cost.

المسكنات،

However, when the choice is between two or more analgesics, the use of marginal cost rather than average would be more appropriate.

# Capital costs

هون انا بتكلم عن حاجة على عمستوى عالي

المكتسبة

These costs are incurred when major assets رأس المال are acquired – the buildings, the equipment, etc.

- Capital costs are not merely the sum actually paid for their acquisition and the interest payments on any loans used to fund such purchases.

تكاليف رأس المال ليست مجرد المبلغ المدفوع فعليا لاقتنائها ومدفوعات الفائدة على أي

قروض تستخدم لتمويل مثل هذه المشتريات

- Account also has to be taken of the opportunity cost of using such assets in one particular way, thereby depriving them of being used elsewhere.

ويجب أيضًا أن تؤخذ في الاعتبار تكلفة الفرصة البديلة لاستخدام هذه الأصول بطريقة معينة، وبالتالي

حرمانها من استخدامها في مكان آخر

# Capital Expenditure

The money that government spends on developing buildings, machinery, equipment, schools, and other infrastructure is known as capital expenditure.
